INTRODUCTION

This report illustrates the composition of the Manitoba economy in terms of the number of establishments. For an explanation of the term establishment please see the Definitions section below.

In Tables 1-5, the number of establishments is presented by:

i) industry sector and employment size for January, 1989
ii) industry sector and region for January, 1989
iii) region for January, 1988 and 1989
iv) employment size and region for January, 1989
v) employment size for January, 1988 and 1989

DEFINITIONS

Establishment - The smallest unit of a company (whether sole proprietorship, partnership, co-operative, corporation, etc.) that is a separate operating entity capable of reporting all elements of basic industrial statistics. Revenue Canada payroll deduction accounts are the base data source for the compilation of establishments.

Establishments are assigned to an industry group, according to the 1980 Standard Industrial Classification (1980 SIC), based on their major industrial activity.

In this article the industry group "Business, Education, Health, Accommodation and Other Services" (SIC 7710-7799, 8511-9999) will be referred to as "Services".

The tables cover all industrial activity in Manitoba but are limited to the employer portion of the business world. Therefore, a business such as a corner store that is owner/operated, with no paid employees, would be excluded from these counts.

Employment Size - Codes give a range of employees only. Most are self-explanatory with the following exceptions:

Zero - indicates either that the business had employees and currently does not, or that the business does not currently have employees but expects to within the next 12 months.

Unknown - is assigned to businesses for which no employment information is available. Experience has shown that 90% of these businesses will have fewer than 20 employees.
